Equity Scorecards	60
- Community Living	63
- Community Participation	71
- Work Economic	81

Background

Theory

Purpose of ADA-PARC Scorecard development is to translate raw measures into easily interpretable and comparable indices of quality of life for the disabled population.

Approach

There are two ways we can think about the 'state of affairs' for the disabled population in any given state x regarding metric y:

1. Relative Terms :

How does the disabled population in state x fare on metric y compared to disabled population in other states?

2. Equity Terms :

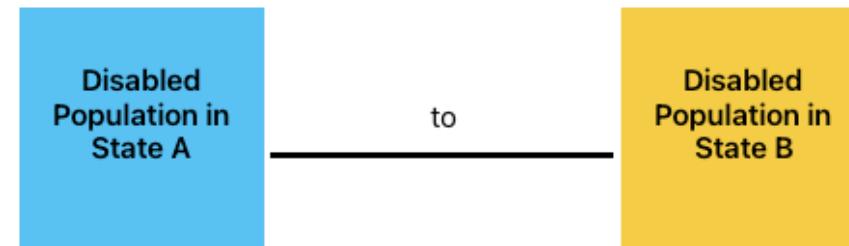

How does the disabled population in state x fare on metric y compared to the non-disabled population in state x. How does this disparity compare to other states?

Relative Scores

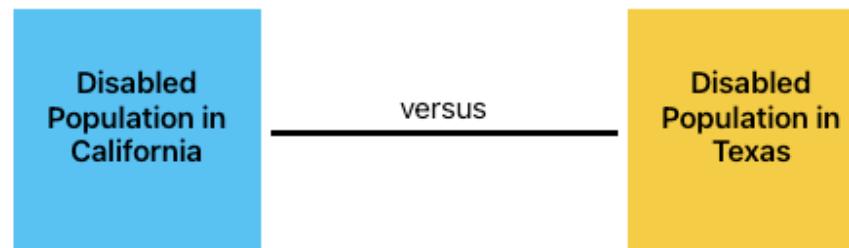

Assess how the disabled population in a given state is doing compared to the disabled population in another state.

compare status for

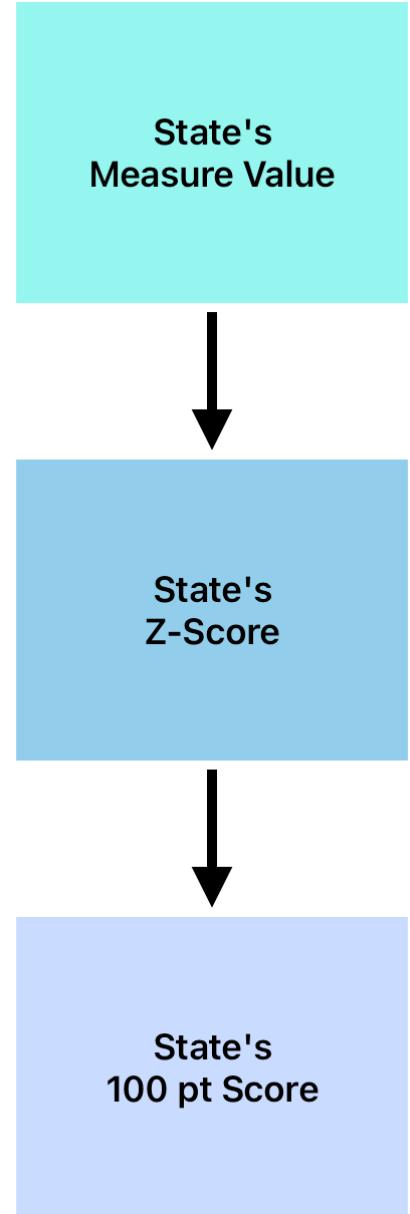

Example : Percentage with smartphone access among...

Relative Scores : Calculation

Steps in going from raw measure value to 100pt score :

1. Calculate Z-Score for each State
 - a. z-score for each measure clipped between -3 and 3 (reversing if a higher score on a measure is undesirable (e.g. lessthan_highschool_pct))
2. Normalize / Scale Z-Score
 - a. Formula $16.666667z+50$ to generate index score
3. Taking row average of index scores to calculate category relative score

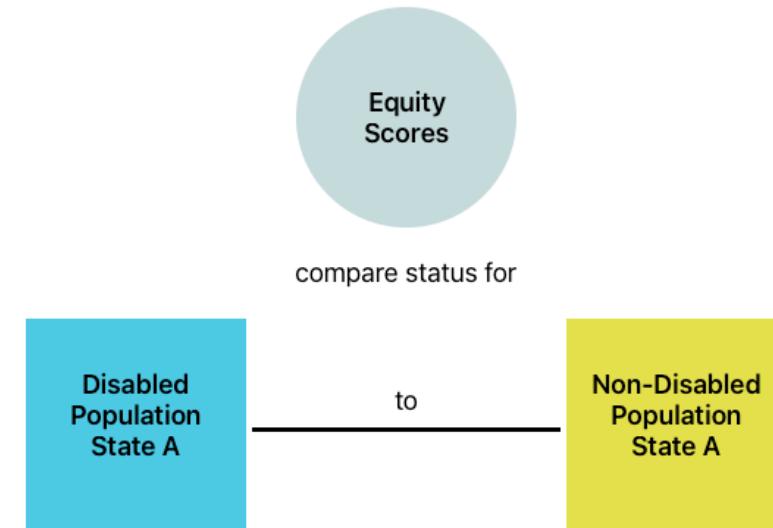

Relative Scores Calculation : Example

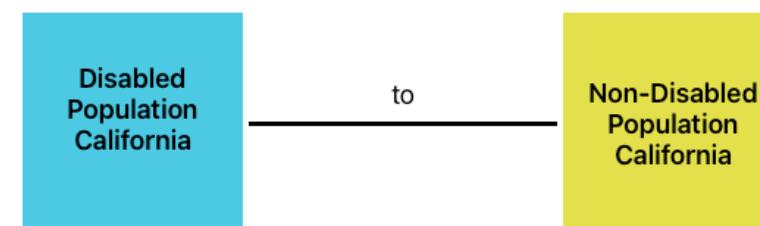

State Name	Raw Score	Z-Score	100pt Score	Pretty Name
Alabama	pwd_below_poverty_pct	z_pwd_below_poverty_pct	REL_index_pwd_below_poverty_pct	Below Poverty Relative Score
	27.35	-0.383007568706886	45.21	45.21

Equity Scores

Assess how the disabled population in a given state is doing compared to the non-disabled population of their own state.

Example : Percentage with smartphone access among...

Equity Scores : Calculation

Equity Score calculation involves one additional step in the process - calculating the disparity.

1. Calculate 'disparity' value for each State

- a. subtracting value of measure for the non-disabled population from the disabled population (e.g. `pwd_below_poverty_pct - pwod_below_poverty_pct`)

2. Calculate Z-Score of disparity for each State

- a. z-score for each measure clipped between -3 and 3 (reversing if a higher score on a measure is undesirable (e.g. `lessthan_highschool_pct`)

3. Normalize / Scale Z-Score

- a. Formula $16.666667z+50$ to generate index score

4. Taking row average of index scores to calculate category relative score

State's Measure Values
(`pwd`, `pwod`)

State's Disparity Value

State's Z-Score

State's 100 pt Score

Equity Scores Calculation : Example

State Name	pwd Raw Score	pwod Raw score	disparity	Z-Score	100pt Score	Pretty Name
Alabama	pwd_below_poverty _pct	pwod_below_povert y_pct	pwd_below_poverty _disparity	z_pwd_below_pover ty_disparity	EQ_index_pwd_belo w_poverty_pct	Below Poverty Equity Score
-	27.35	12.79	14.56	0.077527490100158 4	51.29	51.29

Interpretation : General

- All maps and tables are on a 100 point scale.
- Higher # = more favorable outcome.
- Higher # represented with lighter color.

Interpretation : Relative

- Relative scores assess how the state's disabled population fares relative to the disabled population of other states.
- As scores approach 100, this means the state's disabled population is doing much better on this measure relative to other states.

Interpretation : Equity

- Equity scores assess how the state's disabled population fares relative to the non-disabled population of the same state.
- As scores approach 100, a state has more equity between the disabled and non-disabled population compared to other states.

Interpretation : Relative Example

Relative - Below Poverty

State Name	Raw Score	Z-Score	100pt Score	Pretty Name
	pwd_below_poverty_pct	z_pwd_below_poverty_pct	REL_index_pwd_below_poverty_pct	Below Poverty Relative Score
Utah	18.06	1.52..	69.09	69.09
Kentucky	30.83	-1.09..	36.27	36.27

In this condensed table, two states are displayed to highlight how relative scores are developed and can be compared.

- 18% of the disabled population lives in Utah lives in poverty, since this is significantly better than average, Utah ends up with a positive z-score, and thus a 100pt score above 50.
- 30% of the disabled population in Kentucky lives in poverty, this is worse than average, corresponding to a z-score of -1.09, thus Kentucky has a 100pt score below 50.

Interpretation : Equity Example

Equity - Below Poverty

State Name	PWD Raw Score	PWOD Raw Score	Disparity	Z-Score	100pt Score	Pretty Name
	pwd_below_poverty_pct	pwod_below_poverty_pct	disparity_pwd_bel..	z_pwd_bel..	EQ_index..	Below Poverty Equity Score
Utah	18.06	7.82	10.24	1.70..	78.43	78.43
Kentucky	30.83	12.57	18.26	-1.31..	28.05	28.05

Using the same two states, we now turn to equity scores, showing the difference in their calculation and meaning.

- Utah has a 10.24% higher rate of poverty for the disabled population than the non-disabled population, this is much better than average, corresponding to a z-score of 1.7 and an equity score of 78.
- Kentucky has an 18.26% higher rate of poverty for the disabled population than the non-disabled population, which is worse than average, corresponding to a z-score of -1.3 and an equity score of 28.

How Scores Compare :

Putting the tables side by side, it can be seen how these scores can have different results.

Relative - Below Poverty

State Name	Raw Score	Z-Score	100pt Score	Pretty Name
	pwd_below_poverty_pct	z_pwd_below_poverty_pct	REL_index_pwd_below_poverty_pct	Below Poverty Relative Score
Utah	18.06	1.52..	69.09	69.09
Kentucky	30.83	-1.09..	36.27	36.27

Equity - Below Poverty

State Name	PWD Raw Score	PWOD Raw Score	Disparity	Z-Score	100pt Score	Pretty Name
	pwd_below_poverty_pct	pwod_below_poverty_pct	disparity_pwd_bel..	z_pwd_bel..	EQ_index..	Below Poverty Equity Score
Utah	18.06	7.82	10.24	1.70..	78.43	78.43
Kentucky	30.83	12.57	18.26	-1.31..	28.05	28.05

Outcomes are more favorable on this metric for the disabled population in Utah, both in relative and equity terms.

However...

It can be the case that a State's outcomes are above average in relative terms but below average in equity terms, or vice versa..

STATE	Below Poverty Equity Score	Below Poverty Relative Score
Alabama	51.29	45.21
Connecticut	44.13	53.98
Illinois	46.71	51.59
Indiana	47.02	50.38
Kansas	48.59	51.61
Louisiana	53.68	39.71
Minnesota	33.51	51.77
Mississippi	51.48	38.07
New Hampshire	44.51	61.35
New Mexico	54.5	38.71
Oklahoma	62.54	49.66
Wisconsin	49.66	54.26

On this measure alone, such is the case in 12 states.

Categories

this process, of calculating relative and equity scores was performed across all three categories...

Community
Living

Community
Participation

Work
Economic

Community Living

Measures in this category are related to
the living situation of the disabled
population for each state.

Community Participation

Measures in this category are related to means through which the disabled population is empowered to participate in society.

Work Economic

Measures in this category are related
to labor force characteristics of the
disabled population.
